4. Hanya ada satu tabel yang saling berhubungan. Table yang berhubungan adalah tabel facility dengan tabel location dimana table facility merupakan parent dari tabel location, karna tabel location mengambil data dari tabel facility.

5. alter table

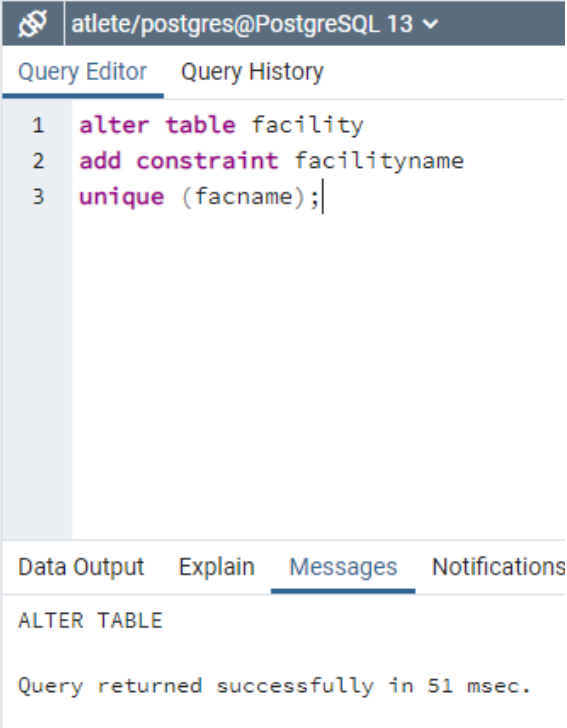

```
location add
constraint _locno
foreign key (facno) references facility (facno);
```

```

1 alter table location
2 add constraint _locno
3 foreign key (facno) references facility (facno);

6. yang saya ketahui, null tidak boleh digunakan dalam foreign key. Saya ingin menjelaskan mengapa foreign key mungkin perlu nol atau mungkin perlu unik atau tidak unik. Pertama, ingat foreign key hanya mengharuskan nilai di bidang itu harus ada terlebih dahulu di tabel yang berbeda (tabel induk). Itu semua adalah definisi FK. Null menurut definisi bukanlah nilai. Null artinya kita belum tahu berapa nilainya.

7. alter table facility
 Add constraint
 facilitynameUnique
 (facname);

The screenshot shows a PostgreSQL Query Editor window. The title bar indicates the user is 'atele/postgres@PostgreSQL 13'. The 'Query Editor' tab is active, displaying a SQL query with line numbers 1, 2, and 3. The query is: `1 alter table facility`, `2 add constraint facilityname`, `3 unique (facname);`. Below the query editor, the 'Messages' tab is selected, showing the output: 'ALTER TABLE' and 'Query returned successfully in 51 msec.'.

```
1 alter table facility
2 add constraint facilityname
3 unique (facname);
```

ALTER TABLE

Query returned successfully in 51 msec.
